

IMPORT OF CONTACT DATA FROM PERSONAL INFORMATION MANAGER SOFTWARE INTO APPLICATION

ABSTRACT

The disclosed methods, apparatus, system, and computer-readable media can be used to map contact data from personal information manager (PIM) software to one or more corresponding fields of an application to automatically populate such application with contact data. The contact data can comprise a person's name, company name, address, telephone number, mobile number, facsimile number, and/or email address. The user of a computer device can input one or more characters into a field of an application, and matching sets of contact data are displayed for the user to select to populate mapped fields of the application.
